

Falling short of your digital transformation goals? You're not alone – over 85% of companies are too¹. In today's environment, the expectation is for you to produce more, faster, at higher quality and lower cost, all while working toward critical sustainability goals. Seeq enables you to unlock the potential of your underutilized industrial data – the very data needed to drive innovation, increase profitability, and enable a sustainable future for your operations.

¹ ARC Advisory

“Our digital transformation team has seen quick wins and substantial ROI. The benefit goes beyond the platform - Seeq is driving a cultural shift in the way we use & value our data.”

—Brent Railey, Chief Data & Analytics Officer, Chevron Phillips Chemical

Accelerating a modern, sustainable industrial future

Seeq is the only enterprise SaaS platform that is purpose-built for time series data, and is trusted by the most recognizable names in oil & gas, pharmaceuticals, specialty chemicals, utilities, renewable energy, and numerous other vertical industries. Seeq accelerates digital transformation efforts and ROI impact by providing live connectivity to hundreds of data sources, and empowering more people across the organization to leverage a broad range of AI capabilities including advanced analytics, machine learning, and generative AI (GenAI).
